

ISRAEL'S USE  
OF AI-DRIVEN  
WARFARE

# AUTOMATING GENOCIDE

**Artificial intelligence** (AI) refers to computing systems that are able to **rapidly process and analyze** enormous amounts of data, and **perform tasks that would typically require human intelligence and decision making.**

The Israeli military uses AI **maliciously to surveil Palestinians, generate targets for airstrikes, and organize military logistics** at an **unprecedented speed**, using undisclosed algorithms.

“

**What used to take hours now takes minutes... With the same amount of people, we do much more.”**

— *Head of the Israeli military's digital transformation unit*

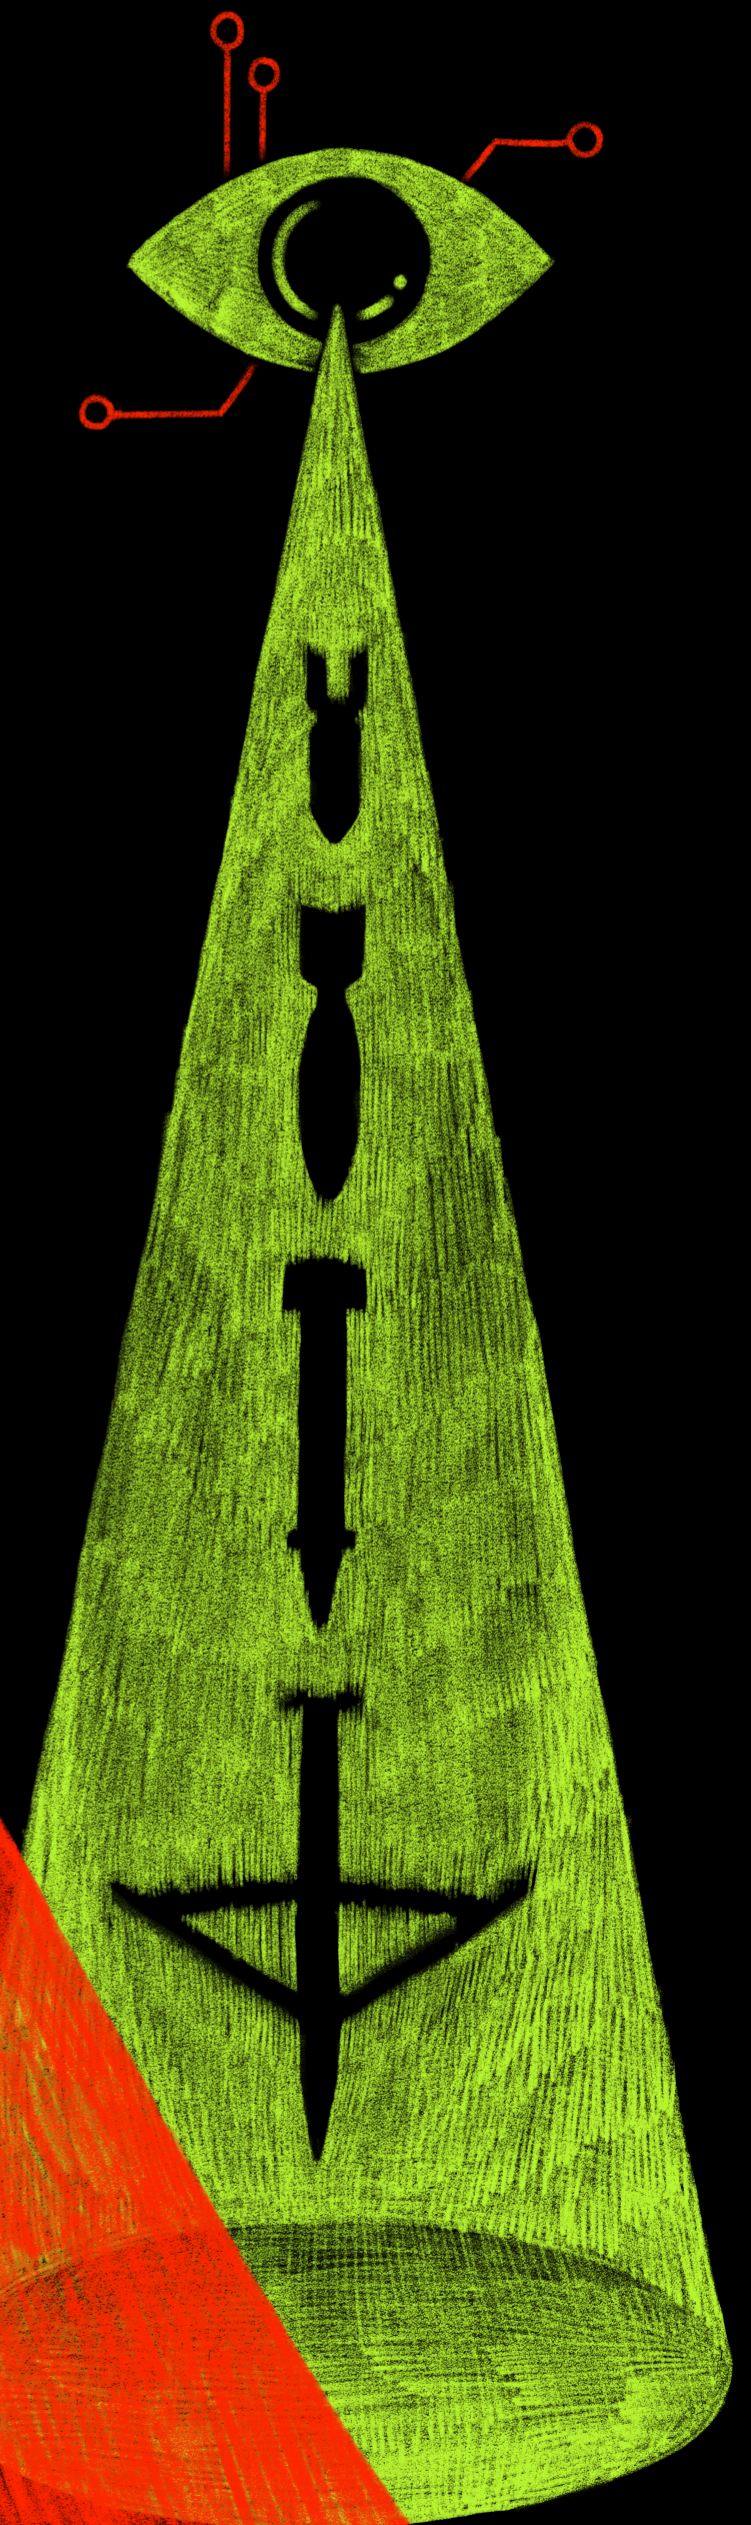

Israel's use of AI has created a  
“**mass assassination factory**” of  
AI-driven **automated warfare and  
genocide in Gaza.**

**29,313+**

**Palestinians  
killed in Gaza**

Oct 7, 2023 - Feb 21, 2024

The overwhelming majority  
of casualties are civilians,  
including over **12,000 children**

The Israeli military's **AI systems** are the product of both **military** and **private sector** research and development

### **ALCHEMIST**

Used for **real-time visual detection of possible targets.**

Developed by the Israeli military's intelligence unit, **Unit 8200**

### **THE GOSPEL**

Used to **select and recommend targets for airstrikes.** Can generate targets at least **50 times faster** than human analysts.

Developed by **Unit 8200**

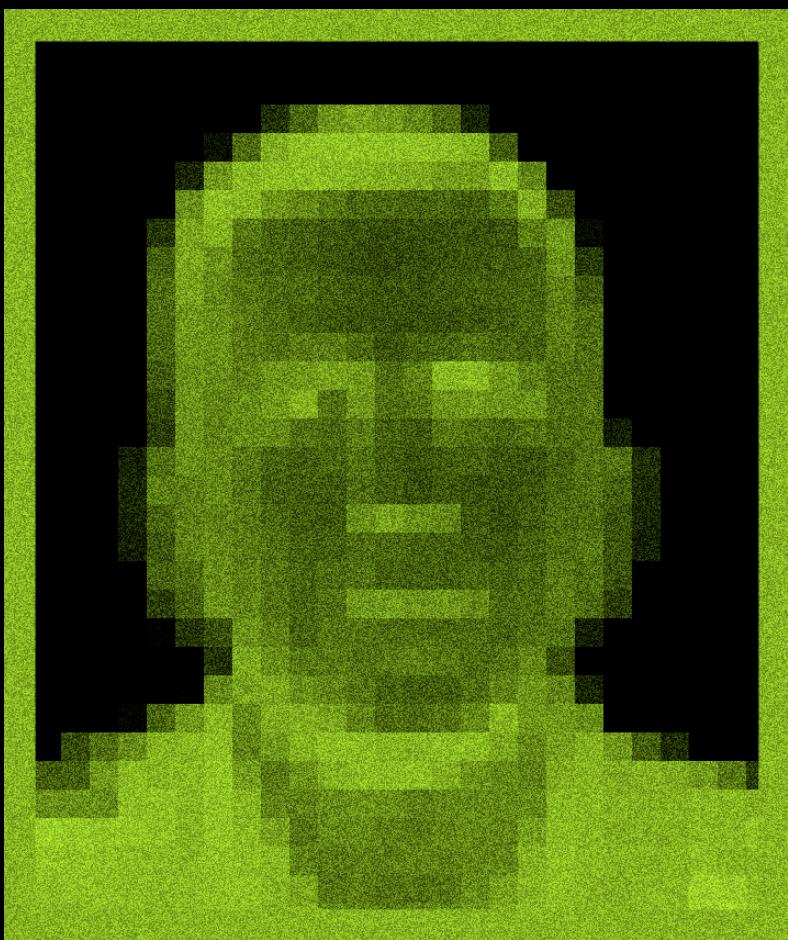

### **FIRE FACTORY**

Used to **organize wartime logistics**, such as calculating munitions payloads, assigning targets to aircrafts, and creating schedules for air raids.

Developed by **Rafael Advanced Defense Systems**, a private Israeli defense contractor

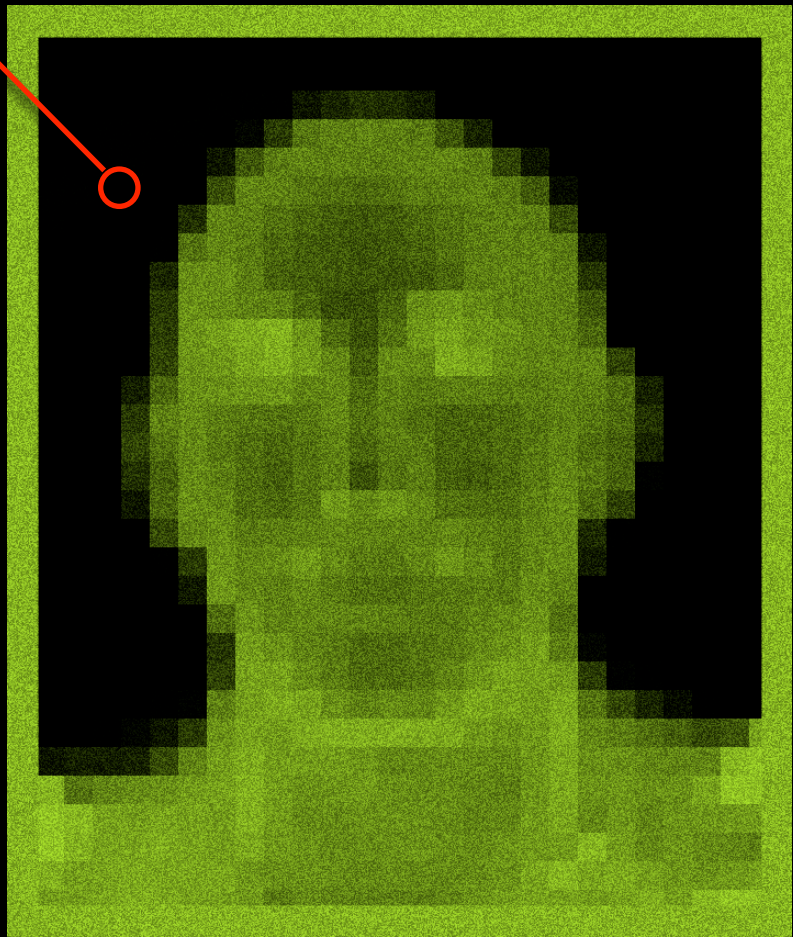

AI **obscures accountability** for decision making and target selection away from individuals and military hierarchies onto a **diffuse, anonymous system.**

However, the AI systems currently used by the Israeli army are **not fully autonomous.**

Each target selected by an AI system must be reviewed and **approved by a human operator.**

Israeli military operators, analysts, and lawyers **know approximately how many civilians will be killed** with each airstrike, because AI predicts **"collateral damage."**

“

**It really is like a factory. We work quickly and there is no time to delve deep into the target. The view is that we are judged according to how many targets we manage to generate.”**

— Source from the Israeli military's Targets Administrative Division

**65,000**

**tonnes of explosives  
dropped on Gaza**

Oct 7, 2023 - Jan 4, 2024

Part of Israel's military strategy is to **deliberately target civilian infrastructure**, a tactic known as the **Dahiya Doctrine**.

The Israeli army uses AI to generate lists of **"power targets"**—such as residential high-rises, universities, and public buildings—in order to **destroy the basic elements of Palestinian society and civic life**.

**1,329**

**power targets  
attacked**

in the **first five days** of  
the 2023–2024 Israeli  
assault on Gaza
